Steven Cleasby-Mayeda

Corvallis, OR | 503-927-2674 | steven.cleasby.mayeda@gmail.com | github.com/Ancorro

EDUCATION

Oregon State University — *Corvallis, OR*
M.Eng. Computer Science (AI Focus) GPA: 3.74 — *Expected June 2027*

- **Relevant Coursework:** Foundation Models, Deep Learning, Optimization for AI, Data Cleaning for ML, Graph Theory, Operating Systems II

Oregon State University — *Corvallis, OR*
B.S. Applied Computer Science (AI Focus) Major GPA: 3.63 — *June 2026*

- Honor Roll (7 terms)
- **Relevant Coursework:** Machine Learning & Data Mining, Mathematical Statistics, Linear Algebra, Vector Calculus, Parallel Programming, Algorithms, Databases, Reverse Engineering Malware

RESEARCH & PROJECTS

Parallel Logic Expert with Operator Routing | Course Project — *PyTorch*

Project Page

- Designed a MoE transformer architecture featuring differentiable fuzzy-set logical operators and learned operator routing.
- Integrated backbone cross-attention to enable specialized logical reasoning pathways for experts.
- Built a PyTorch training/evaluation pipeline, ran ablations, and analyzed routing diagnostics.
- Empirical performance gains over baseline transformers on logical reasoning benchmarks.

Guidance – Agentic Field Technician Assistant | 1st Place, BeaverHacks 2026 — *Gemini, Python*

GitHub Repository | Demo Video | Project Submission

- Won 1st place (beginner track, 20 teams) at BeaverHacks 2026, building the end-to-end solution in 24 hours.
- Architected a multimodal Gemini agent pipeline utilizing image/audio input, transcription, local RAG, function calling, and image editing.
- Ingested technician queries to retrieve manual sections, returning step-by-step instructions with QR-scoped retrieval to speed inference.

Computer Vision – Real-Time Eye Tracking — *Python, MediaPipe*

- Built a Python eye landmark extraction prototype using Google MediaPipe and FaceMesh.

TECHNICAL SKILLS

Best Languages: Python, C

ML: PyTorch, HuggingFace Transformers, transformer design, training/evaluation, ablation studies

Agents: Agentic systems, multimodal pipelines, RAG

Data: NumPy, optimization, statistics, feature engineering, data cleaning/visualization

Systems: Linux, CUDA, Git

EXPERIENCE

Waste Treatment Completion Company *Richland, WA. (Remote)*
Leading Software Engineer (Senior Capstone Project) *Sep 2025 – June 2026*

Project Page

- Lead technical developer for a Python application processing safety-critical calculations for Hanford radioactive waste vitrification.
- Developed data-analysis pipelines for on auditability, consistency, and maintainability.
- Documented the implementation and created the developer handover document for posterity.
- Managed the student student team, in task delegation and personal conflict resolution.

Forever Sabah *Sabah, Malaysia*
Research Intern *Jun 2023 – Sep 2023*

- Analyzed climate change impact on Borneo precipitation outliers using weather model raster data and QGIS.
- Curated wildlife image datasets and established database schemas for individual elephant re-identification.

Oregon State University *Corvallis, OR*
Undergraduate Research Intern *Jan 2023 – Jun 2023*

- Developed data analysis scripts to process research datasets and highlight trend patterns.
- Documented methodology and presented research findings at the OSU undergraduate conference.
